December 4, 2025

To the Recruitment Team,
American Express India,
Gurugram, Haryana.

Re: Application for Analyst-Data Science (Job Number: 25021483)

Dear Hiring Manager,

At American Express, the difference between a successful transaction and a fraudulent one is often measured in milliseconds. As a final-year Data Science undergraduate (**9.04 CGPA**) with a specialization in building high-efficiency predictive models, I am writing to apply for the job role of Analyst - Data Science. I am eager to apply my skills in SQL, Machine Learning optimization, and Data Engineering to the Credit & Fraud Risk (CFR) and Technology teams at Amex.

While many candidates can build models, my focus is on engineering them for the real world—optimizing for speed, scale, and reliability. My suitability for the American Express ecosystem is defined by three core competencies:

- **Precision & Low-Latency Engineering:** In developing my “Multi-Modal Price Prediction Engine,” I engineered a solution that reduced inference latency to **<1ms** and cut RAM usage by **50%** through feature decoupling and PyTorch CUDA optimization. This experience in handling computational constraints aligns directly with Amex’s need for real-time decision engines that process millions of transactions without delay.
- **Data Proficiency (SQL & Visualization):** I possess advanced proficiency in **SQL** for querying complex datasets and have leveraged **Power BI** to build interactive dashboards that translate raw data into strategic insights. My certification as an **Oracle Cloud Infrastructure (OCI) 2025 GenAI Professional** further demonstrates my readiness to work with enterprise-grade cloud data architectures.
- **Leadership & Collaboration:** Beyond technical skills, I bring the “Team Amex” spirit. I spearheaded the Technical & Venue Committee for two consecutive university Hackathons, leading a cross-functional team of 15 members to manage logistics for 400+ participants. This experience honed my ability to communicate complex technical requirements to diverse stakeholders and ensure operational excellence under pressure.

I am drawn to American Express not just for its reputation as a fintech pioneer, but for its culture of backing its people to solve complex problems. I am confident that my technical rigor and operational leadership will allow me to contribute meaningfully to your analytics and engineering workstreams.

I am available for an immediate start and am willing to relocate to Gurugram, Bengaluru, or Chennai as required. Thank you for your time and consideration.

Sincerely,

Yuvraj Singh Kushwah
