December 5, 2025

To the Deputy Director General (HR/Tech),
Unique Identification Authority of India (UIDAI),
Headquarters / Technology Centre.

Re: Application for Internship Program 2025 – Technology Track (Data Science/Data Analytics/AI)

Dear Sir/Madam,

Aadhaar is not just an identity framework; it is the bedrock of India's Digital Public Infrastructure (DPI). As a final-year Data Science undergraduate with a **9.04 CGPA** and specialized expertise in building scalable, low-latency AI systems, I am writing to express my strong desire to contribute to UIDAI's mission of empowering residents with secure and efficient digital identity services. I am eager to apply my technical rigor in **Machine Learning Optimization, Signal Processing, and Fraud Analytics** to support the technological advancements at the UIDAI Technology Centre.

While my academic background provides a strong foundation, my project portfolio demonstrates my ability to engineer solutions for scale, security, and efficiency—core pillars of the Aadhaar ecosystem. My suitability for this internship is defined by three key competencies:

- High-Performance System Engineering (Latency Optimization):** In my “High-Efficiency Predictive Resource Engine” project, I did not just build a model; I optimized it for deployment on constrained hardware. By utilizing PyTorch CUDA acceleration and feature decoupling, I reduced inference latency to **<1ms** and cut memory usage by **50%**. This experience is directly transferable to optimizing biometric authentication requests where millisecond-level responsiveness is critical for user experience.
- Advanced Signal Processing & AI (ORBITUNE):** Through my innovative project “ORBITUNE,” I engineered a system that uses Digital Signal Processing (DSP) and Machine Learning to transform raw audio streams into immersive formats. This hands-on experience with signal transformation and noise reduction algorithms is highly relevant to enhancing the quality and accuracy of biometric data capture (voice/face/iris) in diverse environmental conditions.
- Data Security & Integrity Pipelines:** Developing “CONTRA,” a secure data retrieval pipeline, required me to build robust API integrations that aggregate real-time data while maintaining consistency. Coupled with my experience in **Fraud Analytics** (JPMorgan Virtual Internship), where I modeled default probabilities to detect anomalies, I bring a security-first mindset essential for protecting the integrity of resident data.

Beyond technical skills, I possess a deep commitment to public service and operational excellence. As the Operations Lead for two major hackathons (400+ attendees), I demonstrated the ability to manage cross-functional teams and deliver logistical success under pressure—qualities I aim to bring to UIDAI's dynamic work environment.

I am available for an immediate start and am willing to relocate to Bengaluru, Chandigarh, Mumbai, Ranchi, Hyderabad, Lucknow or New Delhi as required. Thank you for considering my application to serve the nation's premier digital authority.

Sincerely,

Yuvraj Singh Kushwah
